PROFILE

Gameplay designer who implements his own systems.

A decade in games across a live competitive platform fighter, a AAA contract, and independent engine work. I specialise in melee combat and character mechanics: frame data, hitboxes, state machines, and the designer-facing tooling that turns balance into a fast iteration loop instead of a rebuild. I've shipped thirteen playable characters on a live fighting game and written the C# underneath them.

SKILLS

Design	Combat & moveset design, gameplay systems, movement, player progression, balance from player feedback and match data, live content updates
Programming	C#, gameplay architecture, state machines, NPC behaviour & AI, networked gameplay, procedural generation, editor & tool development
Engines	Unity, Godot, Unreal
Level Design	Blockout, kitbashing, lighting
Workflow	Git, Jira, Notion; spot work in VFX, SFX, animation and UI implementation

EXPERIENCE

Independent Development / Gameplay Systems & Engine Work JAN 2026 — PRESENT

- Solo networked 3D action-combat project in C#: combat, movement and animation systems, including procedural generation of character movesets from an animation library.
- Ported the project from Unity 6 (FishNet, Animancer) to Godot 4.7 mid-development, rebuilding the character controller, animation and networking layers.

Rockstar Games / Contractor — Game Design, Programming, Tooling APR 2025 — DEC 2025

- Worked on NPC behaviour and gameplay systems for an unannounced title as part of a large multi-discipline team. (*Project under NDA.*)
- Built and maintained internal tooling supporting design iteration on those systems.
- Operated to AAA production standards: code review, large-scale source control, cross-discipline review.

Nordic Dice / Design & Development FEB 2025

- Ideated, designed and built minigames for an online storefront, taking concepts from pitch through to working implementation.

Kasper Lapp / Design & Tools — board game designer, Magic Maze JUL 2024

- Built a gameplay simulation for balancing a card game in development, letting the designer evaluate rule and cost changes across large numbers of simulated matches.

Rushdown Revolt / Vortex Games — Design, Programming, Level Design SEP 2020 — SEP 2023

- Designed and implemented **13 playable characters** for a live competitive platform fighter — 4 original (Seth, Velora, Reina, The Torment) and 9 full reworks — covering moveset design, frame data, hitboxes and the C# implementation of each.
- Owned combat balance on a live build, driving reworks and mechanical changes from player feedback and competitive-scene input across an ongoing patch cadence.
- Built levels and play areas from ideation through blockout and lighting, including stages assembled entirely from kitbashed assets with no art budget.
- Worked across an interdisciplinary remote team; spot work on VFX, sound design, animation and UI implementation.

Independent Game Development / Solo Developer JAN 2016 — SEP 2020

- Built experimental games in Unity focused on systems and gameplay mechanics, sustained alongside full-time work outside the industry.

Press Play / Game Design Intern SEP 2015 — DEC 2015

- Level design, playtesting and ideation with the design team on an unannounced prototype.

EDUCATION

AP Datamatiker — Computer Science, games specialisation · Dania Academy 2013 — 2016

HTX — Vibenhush Gymnasium 2010 — 2013

Languages Danish (native) · English (fluent)
